# **BLOCK** POURING

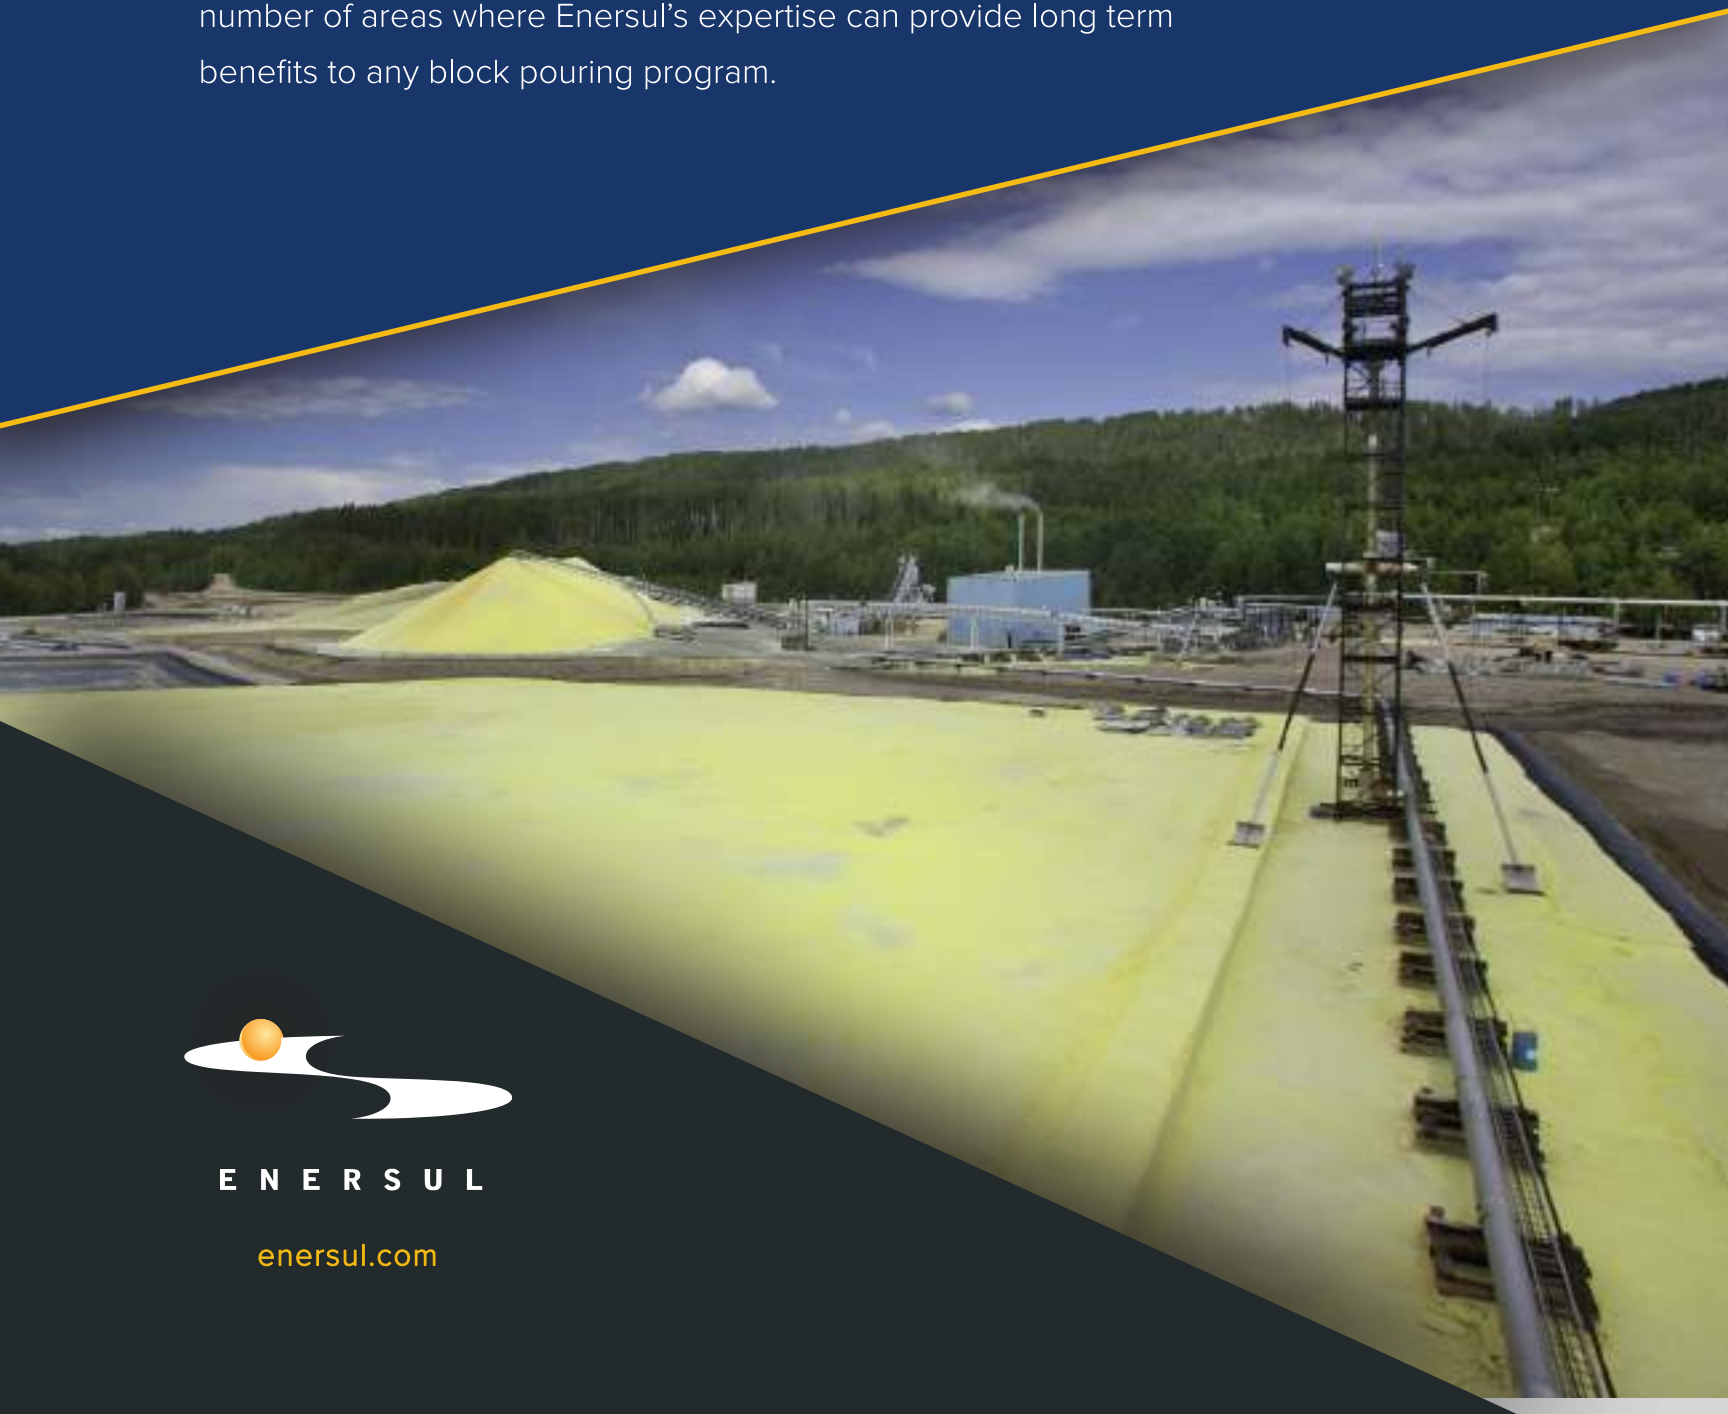

## CUSTOMIZABLE BLOCK POURING SOLUTIONS

● Pouring molten sulphur to block appears to be a simple exercise, yet due to physical properties and hazards associated with sulphur, there are a number of areas where Enersul's expertise can provide long term benefits to any block pouring program.

## SULPHUR BLOCK POURING TOWERS

Sulphur Block Pouring is a long term sulphur storage solution.

### Proven Experience

Enersul has extensive experience in the design and management of block pouring equipment and facilities. Our technologies are designed to be safe, efficient, and meet the strictest environmental requirements

### Customizable

Before beginning a sulphur pouring operation, Enersul Specialists work with clients throughout the entire process to review the desired pouring specifications, site capabilities, climate conditions, future remelt plans and make appropriate provisions for collecting and treating surface water runoff.

### Equipment Description

Enersul offers complete turnkey solutions:

- Structural steel support tower complete with ladders, platforms, and grating
- Jacketed pneumatic actuated valves
- Carbon steel swivel joints
- Aluminum pouring arms
- Spreader plates
- Local control panel for field indication and control
- Electrical power drives for moving the pouring arms across the block
- Instrument cables, cable tray, and cable glands for all instruments to junction boxes
- Flexible steam and condensate connections for swivel joints
- Packing, handling and crating
